

# WL UCITS Check Direct / Mutations

CETREL Securities - Worldline  
*The reference  
in Financial Data Services*

## The Company

In 2006, CETREL Securities S.A. has been created as a **regulated company** supervised by the CSSF and dedicated to financial data services and regulatory reporting.

## UCITS Context

Since 2009 CETREL Securities is serving customers all over the globe with its standardized product UCITS Check.

The UCITS directive provides rulings and guidelines for pre- and post-trade checks to be done by UCITS compliant investment funds in relation with instruments acquired for the fund's underlying assets.

The aim of UCITS is to guarantee that the underlying portfolio constituents of a regulated fund are risk-transparent and liquid. In this context a pre-trade check has to be done to determine whether or not an instrument is eligible according to the provisions of the UCITS directive and the CESR guidelines

## Product Description

CETREL Securities has developed a specific set of rules mapping the UCITS eligibility assessment decision trees to the SIX Financial Information VDF data feed.

The client generates an ad-hoc request originated by the trading or compliance environment, which is sent to CETREL Securities. SIX data sets are acquired and cycled

through the UCITS Check application and an eligibility flag is calculated and returned to the client environment allowing solving the pending order.

In addition to a technical flag (eligible article 41-1, eligible article 41-2, liquidity monitoring - article 37 - ), structured information for further back-office usage and reports in PDF format are sent back to the client.

Based on the VDF data, the UCITS Check solution is able to provide a clear eligibility assessment for more than 90% of all requested financial instruments thus considerably easing up the compliance work of our customers in a challenging and highly time critical process. The UCITS Check service is used in various jurisdictions including Benelux Countries, Ireland, France, Baltic States, United-States, Singapore, Switzerland and the Nordics.

## UCITS Check Direct / Mutations

With **UCITS Check Direct**, the eligibility of individual instruments is checked, from a 33 million instruments database updated every 15 minutes. The client has an online access through a Graphical User Interface, and can log intraday ad-hoc requests. A detailed PDF report (eligibility per instrument) is made available to the client.

**UCITS Check Mutations** provides daily eligibility check based on the client's instrument portfolio and a detailed PDF report and technical feed (eligibility per instrument).
